

HITANO ENTERPRISE CORP.
Multilayer Ceramic Capacitors

APPROVAL SHEET

CONTENTS

| | |
|--|--------------|
| Introduction | 2 |
| Part Number Code | 3 |
| Capacitance Range – NPO | 4-5 |
| Capacitance Range – X7R/X5R | 6-7 |
| Capacitance Range – Y5V & SPQ | 8 |
| Specifications and Test Methods | 9-12 |
| Packing | 13-16 |
| Soldering profile | 17 |
| Storage and Label | 18 |
| PCB Design | 19-20 |

HITANO ENTERPRISE CORP.

Multilayer Ceramic Capacitors

1. Features

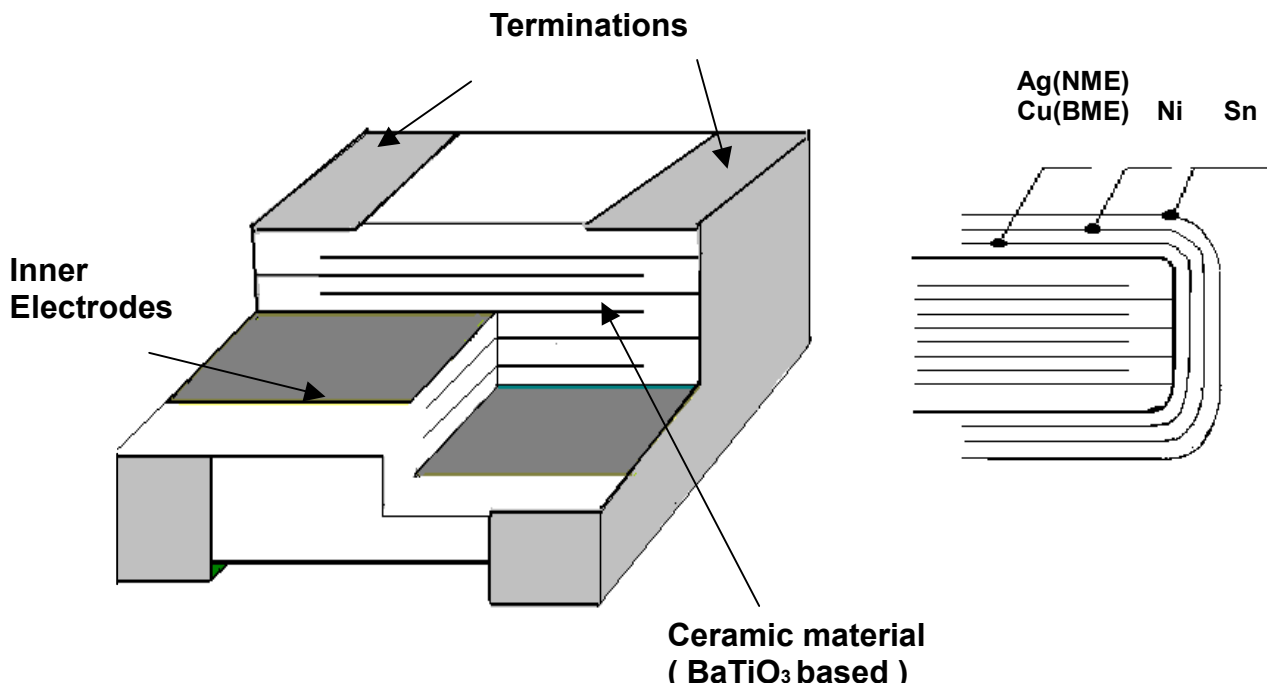

Various temperature characteristics cover a wide range in small size.
Mounted either by flow or reflow soldering methods
Excellent dielectric strength due to uniform structure of dielectric layers

2. Applications

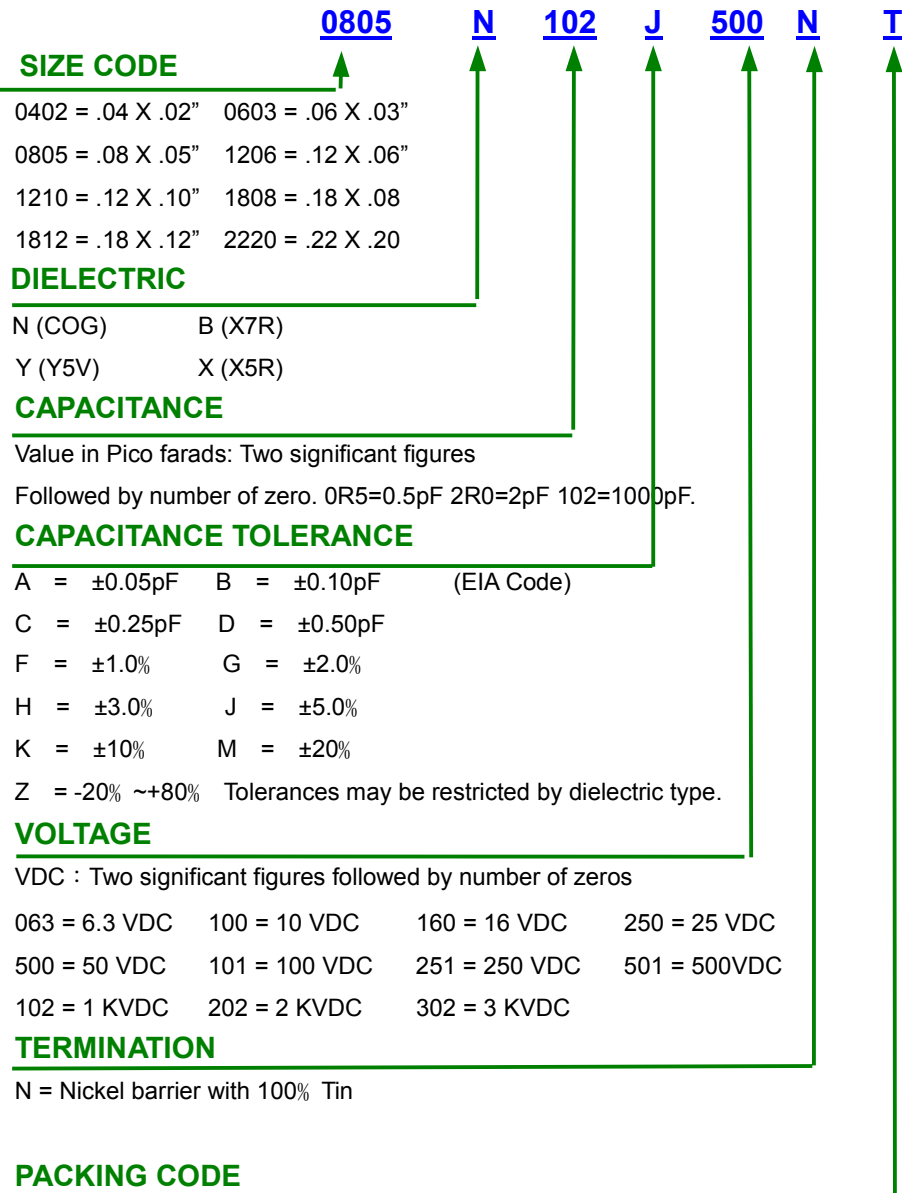

MLCC are becoming increasingly important key electronic applications, which are helpful in reducing the size of electronic circuitry. MLCC are used extensively in computers, communicative products, and the detail applications which including the followings:

- Discharge of Stored Energy
- Blockage of Direct Current
- Coupling of Circuit Components
- By-Passing of an AC Signal
- Frequency Discrimination
- Transient Voltage and Arc Suppression
- Surge Protection

3. Construction of MLCC

| 10" | 250 ±0.5 | 100 ±1.0 | 13.0+0.5/-0.2 | 8.4+1.5/-0 | 14.4 |
| 13" | 330 ±0.5 | 100 ±1.0 | 13.0+0.5/-0.2 | 8.4+1.5/-0 | 14.4 |

9. Soldering Profile

Recommended Soldering Profile (Prevention of thermal shock)

Figure.(I) IR reflow soldering profile for SMT process with SnAgCu series solder paste , (lead free type)

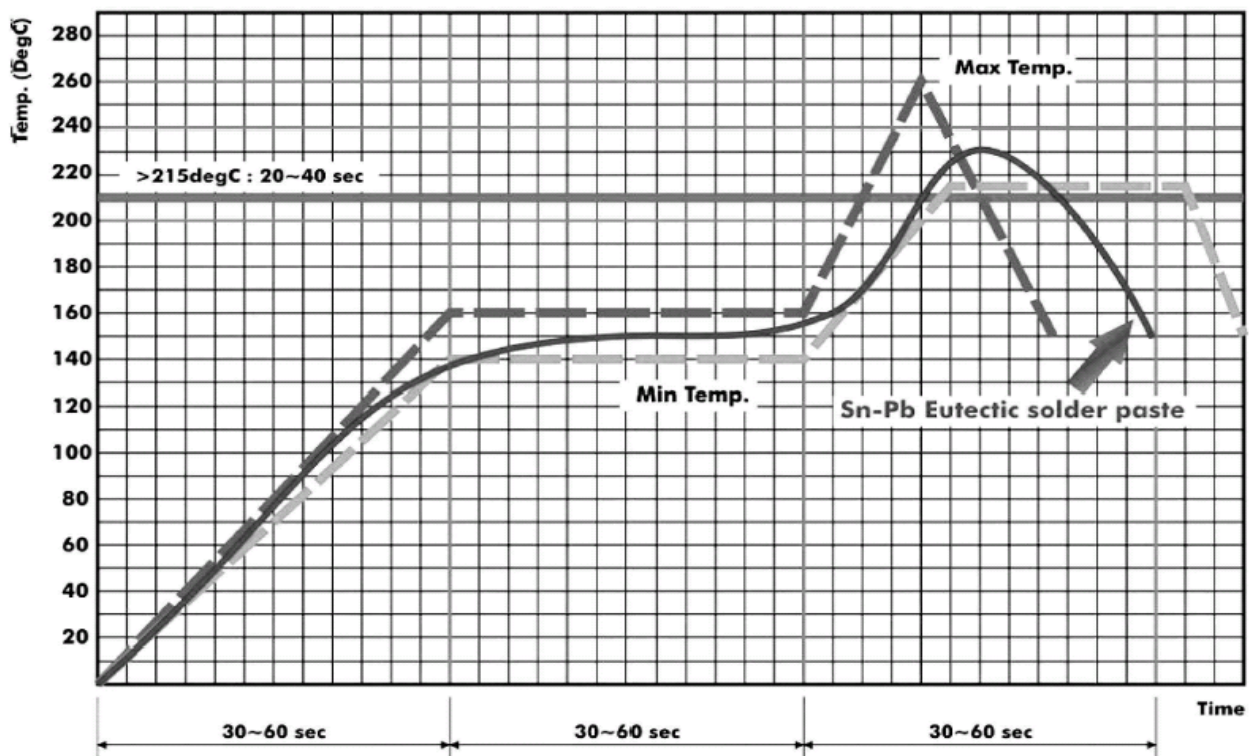

Figure. (II) IR reflow soldering profile for SMT process with SnPb series solder paste.

10. Storage

1. To store products at 5 to 40°C ambient temperature and 20 to 70% related humidity conditions.
2. The product is recommended to be used within one year after shipment. Check solderability in case of shelf life extension is needed.

Caution:

- A. Don't store products in a corrosive environment such as sulfide, chloride gas, or acid. It may cause oxidization of electrode, which easily be resulted in poor soldering.
- B. To store products on the shelf and avoid exposure to moisture.
- C. Don't expose products to excessive shock, vibration, direct sunlight and so on.

12. PCB design

Chip components are susceptible to board stress since the component itself is mounted directly on the board. They are also sensitive to mechanical and thermal stress when solder, which may cause chip cracked.

Please take solder form and component layout into consideration to eliminate stress.

12.1. Pattern form

(1) Placing of chip components and component.

incorrect

correct

(2) Placing close to chassis.

incorrect

correct

(3) Placing leaded components after chip component.

incorrect

correct

PCB design

(4) Lateral mounting

incorrect

correct

12-2. Component direction

To design a mounting position that minimizes the stress imposed on the chip during flexing or bending of the board.

(1) put the component lateral to the direction in which stress acts.

(2) Component layout close to board separation point.
Susceptibility to stress in the order: $A > C > B = D$
